

C3 ADF

The Original Anti Detection Foil

Originally used by the military as a top secret defence weapon against infrared sensor devices, it's now being used in the horticultural industry as a reflective film.

Why use C3 Anti Detection Foil?

C3 ADF reduces temperature by 5 degrees!

When ADF is not used, heat from the lights is absorbed by all objects, including the walls in the room. ADF reflects more than 90% of the heat, so that most of the heat goes out your exhaust fan, thereby reducing the growroom temperature.

Before
Installation ..

After
Installation ..

C3 ADF reflects 95% of light!

20% more light reflective than black and white plastic film, that results in bigger yield and more efficient energy consumption.

C3 ADF is durable and easy to work with.

C3 ADF does not clear up on contact with liquid.

C3 ADF reflects infrared beam.
